Adding a video of what JuniperX is which will keep playing in the background in low opacity and if the viewer wants to play he/she can press the button.

I have created a micro-interaction with an interactive map and sidebars. I have added sections " New features in JuniperX " Which has a micro-interaction which operates on hover over.

I have added the testimonial section of the clients who have used JuniperX, at the bottom of the website page which has a hover over micro-interaction.
